

Innovative E-Ticket Database Hosting and Interline E-Ticketing Connectivity

Travelport E-Ticket Technologies™

Are you taking full advantage of your interline partnerships?

The right e-ticketing and interline e-ticketing (IET) solutions are key to your ability to lower costs, increase revenues, and build profitable partnerships and alliances in today's electronic environment. Having an interline ticketing relationship isn't enough as customers expect to seamlessly e-ticket on you and your partners.

Which e-ticketing and IET solutions will meet industry requirements, today and in the future, and truly lower your IT and development costs? If you want e-ticketing technologies to help you capture new business, which ones will best support you and your valued partnerships, as well as expand your distribution capabilities through new channels? And since speed to market can make or break any opportunity, how long will implementation take?

Give your airline every advantage through Travelport E-Ticket Technologies

When you choose Travelport's globally recognised E-Ticket Technologies, your e-ticketing needs and goals can be answered at significantly reduced costs and with a speed to market that rivals traditional methods.

The Travelport ETDBase™ is a proven e-ticket database hosting service that stores and manages all of your e-ticket data for online and interline e-ticketing. The Travelport E-Ticket Interchange™ is a leading global e-ticketing facility that manages the exchange of interline electronic ticket messages between you and your airline partners, and ground handlers. When you use both the ETDBase and the E-Ticket Interchange, you have e-ticketing access to the world's global distribution systems (GDS) and all other IET-enabled airlines.

A WORLD OF OPPORTUNITY THROUGH INDUSTRY STANDARD SOLUTIONS

- > Stay ahead of the competition with solutions that set the industry standard in e-ticket database hosting and interline e-ticketing services
- > Lower your IET development costs by more than 65 percent by maintaining a single EDIFACT version and a single link to facilitate all partner and ground handler connections
- > Grow with ease through unequalled and unlimited interline connection opportunities
- > Quickly realise new opportunities through our rapid implementation process that establishes interline partner connections in days, rather than months
- > Gain immediate access to the latest e-ticketing solutions and industry enhancements
- > Capture new business by entering codeshare, alliance, interline and ground handler relationships, and enable e-ticket-based GDS distribution to reach third-party distributors
- > Substantially reduce your e-ticket database costs by buying a leading and proven global solution, versus building and maintaining your own
- > Meet your e-ticket database requirements today and far beyond with a highly scalable solution built for airlines of any size and regardless of your e-ticketing volume

Experience the full range of IATA-compliant e-ticketing capabilities

Travelport E-Ticket Technologies let you take advantage of full electronic ticketing functionality to meet your requirements and budget, within your desired timeframe. You have the ability to implement bilateral e-ticketing transactions, presenting full electronic ticketing capabilities for you and your partners. The service is platform-independent, so any airline can take advantage of the solution. Your airline gains the ability to:

- Store and manage all e-ticket transactions for online and/or interline e-ticketing through a flexible e-ticket database hosting service
- Issue online or interline e-tickets, and receive IET transactions from partners
- Facilitate IET transactions from travel agencies through the GDS, and also from online travel distributors
- Establish new partner connections in days

We support nearly 40 percent of all interline e-ticket relationships worldwide

Travelport's globally recognised E-Ticket Interchange was the first product supporting a true interchange process. With nearly 400 partners, the E-Ticket Interchange currently serves more than 5,700 IET relationships, processing over 55 million messages each month. You and your airline partners, and ground handlers, benefit from a leading global e-ticketing message switching facility that performs interactive message translation and switching functions for interline e-ticketing, and both the interactive and control methods for ground handling.

Why choose Travelport E-Ticket Technologies over other solutions?

Travelport understands your need for speed, efficiency, a solid return on your investment and unlimited opportunity for growth. Our E-Ticket Technologies open these doors for you and more. How? Travelport is one of few providers to offer e-ticketing solutions to airlines worldwide, and it's even more rare to find a provider whose offerings include a leading interline e-ticketing interchange solution, so our portfolio is truly global and inclusive. Our partnerships with other leading providers, our deep e-ticketing knowledge base and highly skilled developers all combine to comprehensively support your e-ticketing requirements.

A full suite of translation and message switching solutions

The E-Ticket Interchange is part of the Travelport Interchange Suite™, a proven and growing collection of translation and message switching tools that support functions between airline partners. If your processing needs go beyond the e-ticketing arena, the suite also includes the Travelport Reservation Interchange™ and the Travelport Check-In Interchange™. We firmly believe that no other solutions offer the same value, speed to market, design and cost-efficiency to support your partnerships and alliances.

Airline

Operate with the most advanced and cost-efficient E-Ticket Technologies
