

Air Choice One selects Travelport's iPort departure control system and interline ticketing technology

7 December 2017

Travelport (NYSE: TVPT), the leading Travel Commerce Platform, today announces that St. Louis-based **Air Choice One** has become the latest airline to deploy Travelport's iPort departure control system (DCS), the industry's leading ground handling technology.

"Fast-growing airlines like Air Choice One recognize the importance of operational efficiencies to both their bottom-line and to their overall customer experience. Travelport's iPort technology offers such airlines a cost-effective solution to implement large-carrier ground handling capabilities that meet their current needs and future growth plans," said Dan Westbrook, Travelport's Vice President and General Manager for Air Commerce Technology.

Shane Storz, Chief Executive Officer for Air Choice One, added: "Our mission at Air Choice One revolves around being in service to others, in the air, on the ground and in the community. As we continue to grow beyond the ten airports we currently serve, including Chicago, Minneapolis and St. Louis, we were looking for a departure control solution that would enhance our mission, and support new opportunities through interline e-ticketing (IET) agreements. The iPort technology meets those needs, and provides flexibility for Air Choice One's continued growth."

iPort is the most efficient and flexible DCS technology currently available to drive high performance in travel operations. More than 60 airlines and ground handling companies, at more than 200 airports worldwide, have chosen Travelport's iPort DCS.

Developed in collaboration with airport handling system leader, [Res2](#), iPort is a web-based application which delivers commercial and operational advantages to both airlines and ground handlers by enhancing sales of ancillary services and streamlining departure operations, centralizing load control and improving the traveler experience at the airport.

Built on thin client architecture, iPort deploys rapidly and is cost-effective to maintain. Companies using iPort can handle multiple airlines simultaneously, connecting airlines and ground handlers to one central system. iPort helps ground handlers reduce IT costs and increase airport adoption and acceptance.

Compatible with any passenger service system (PSS), iPort not only streamlines IT processes for airlines, but provides passengers with a convenient self-serve check-in process through all channels, whether at the airport, mobile or online. iPort's flexibility also improves the customer experience and reduces airport congestion.

About Travelport

Travelport is the technology company which makes the experience of buying and managing travel continually better. It operates a travel commerce platform providing distribution, technology, payment and other solutions for the global travel and tourism industry. The company facilitates travel commerce by connecting the world's leading travel providers with online and offline travel buyers in a proprietary business-to-business (B2B) travel platform.

Travelport has a leading position in airline merchandising, hotel content and distribution, car rental, mobile commerce and B2B payment solutions. The company also provides IT services to airlines, such as shopping, ticketing, departure control and other solutions. With net revenue of over \$2.5 billion in 2018, Travelport is headquartered in Langley, U.K., has over 3,700 employees and is represented in approximately 180 countries and territories.

About Air Choice One

Based in St. Louis, MO, Air Choice One was launched as a scheduled airline serving to hard-to-reach communities, and supports their economic development by increasing business productivity while enhancing the travel experience for business and leisure travelers alike. Air Choice One markets enjoy the benefits of efficient, scheduled airline service into larger cities, like St. Louis, Chicago and Minneapolis packaged in a "First-Class" service and seating format. Air Choice One's goal is to deliver the highest quality and reliability in scheduled commercial air service.
